PATHWAY GUIDE · 2026–27

MedLex Foundations

Clinical training makes a doctor. It does not make a career.

Professional development for doctors beyond clinical training: how the system works, how to lead, and how to protect your career — the skills every clinician is expected to have, and almost no one is taught.

THE CLINICIAN'S EDGE

CLINICAL LEADERSHIP PROGRAMME

AI FOR CLINICIANS

Medical school teaches medicine. Nobody teaches the rest of the job.

Every doctor is expected to understand how the service runs, to audit, to teach, to lead a meeting, to keep a portfolio that stands up at appraisal — and, one day, to answer for a decision in an investigation.

Almost none of it is taught. It is picked up in corridors, from whoever happens to be around, and usually after it has already mattered. Doctors who move between health systems — from Egypt to the Gulf, from the Gulf to the United Kingdom — feel the gap most, because the unwritten rules change with every border.

Foundations teaches that part of the job directly: plainly, practically, and in the order you will need it.

“No one fails at this because they are not clever enough. They fail because no one ever sat them down and explained how the job actually works.”

DR AHMED ABOUELGHIT

Who it is for

Early in your career

Foundation doctors, residents and trainees who want to understand the system from the start, not years in.

Moving up

Registrars, specialists and doctors preparing for senior posts, interviews and their first real responsibility for others.

Already leading

Consultants and clinicians in management roles who were given the title before anyone explained the job.

Open to doctors in every specialty — not only psychiatry — working in the United Kingdom, the Gulf, Egypt and beyond.

Three programmes. Take the one you need now.

Each programme stands on its own. There is no required order: start with the one that matches where your career is today.

COMING SOON · FIRST COURSE

The Clinician's Edge

Online · self-paced · English

Eight modules on the non-clinical skills every doctor is expected to have: the system, communication, audit, research, teaching, leadership basics, portfolio and investigations.

Choose it if you are building a career and want the whole foundation, at your own pace.

Page 4

COMING SOON

Clinical Leadership Programme

Live · in person · Arabic or English

Six modules over consecutive days for clinicians who lead, or are about to lead, a team, a unit or a service — built around real service decisions.

Choose it if you now have responsibility for other people and want to lead them well.

Page 7

COMING SOON

AI for Clinicians

Practical · for clinical settings

What AI can and cannot do in clinical and professional work, how to use it safely and well, and where the professional and medico-legal lines sit.

Choose it if you are already using AI at work — or are being asked to — and want to do it properly.

Page 7

Written by a practitioner

Every programme is written and taught by the founder, a consultant who directs specialist training and leads clinical services.

Built for more than one system

Examples drawn from the United Kingdom, the Gulf and Egypt, so the principles travel with you.

Made to be used

You leave with work done and tools kept — not notes taken and forgotten.

The Clinician's Edge

8 modules. 8 skills you will use.

Online and self-paced, in English. Each module stands on its own, so you can start with the one you need this month.

01 How the System Works

How a hospital or health service is actually organised: who decides what, where priorities and money come from, and where your work fits in.

By the end: Walk into any department and understand how it runs.

02 Communication at Work

Emails, handovers, referrals and meetings — the everyday professional communication that decides how colleagues see you.

By the end: Communicate with the clarity colleagues expect.

03 Audit & Quality Improvement

What audit and QI really are, how the cycle works from standard to re-audit, the difference between the two, and what you will be asked to do.

By the end: Take part in, and talk about, audit and QI with real understanding.

04 Research

Reading a paper critically, what research involvement realistically means at your level, and how to find your way onto a project.

By the end: Discuss a paper, and find your route onto a project.

05 Teaching, Supervision & Feedback

Teaching students and juniors, supervising well, and giving feedback people can use — and receiving it without defending.

By the end: Teach and supervise in a way that is noticed.

06 Management & Leadership Basics

Rotas, meetings, priorities and people: the leadership asked of doctors long before any formal title.

By the end: Step into team situations with confidence.

07 Portfolio, Appraisal & Revalidation

What to collect, how to reflect in writing, and how to make appraisal work for your career rather than against it.

By the end: Know what to collect, from the first day.

08 Preparing for an Internal Investigation

What happens when a complaint or incident is investigated, what is expected of you, how to write a statement, and how to protect yourself.

By the end: Understand the process, and protect yourself.

08

The module people wish they had taken earlier

Most doctors meet an internal investigation for the first time when they are inside one. Module 8 explains the process before you need it — which is when it helps.

One module, or all eight

Facing appraisal? Start with Module 7. Just asked to run an audit? Module 3. The course is built so the module you need this month works on its own — and the whole set adds up to the career nobody explained.

Short to watch. Built to use.

Short video lessons

3 to 5 per module, 4 to 8 minutes each. Captioned, resumable, on any device.

A reading with every video

A short written piece under each lesson, from a different angle — the common mistake, the interview question, the worked example.

Interactive lessons

Real situations where you decide what happens next, and see why each choice works or fails.

EXAMPLE · MODULE 3, INTERACTIVE LESSON

The audit you were handed on Monday

Your consultant stops you in the corridor: *“Can you do an audit on VTE prophylaxis for the department meeting in six weeks? Just pull the notes and see how we’re doing.”* She is gone before you can ask anything. You have never run an audit. What is your first move?

Start pulling the last 50 admissions and record whether prophylaxis was prescribed.

Find the standard first — the guideline the department is meant to follow — and write it down.

Ask the audit department for a template and wait for it.

Data without a standard is a survey. You would finish the six weeks with numbers and no way to say whether they are good or bad.

What you get

Workbook & toolkit

Templates, checklists and exercises for every module — yours to keep.

The Foundations group

A WhatsApp group of doctors across the UK, the Gulf and Egypt, comparing how their systems actually work.

Weekly insight emails

One topic a week from the founder, through your course.

Certificate

A certificate of completion when you finish the 8 modules.

Clinical Leadership Programme

For clinicians already leading — or about to lead — a team, a unit or a service.

6 modules delivered in person over consecutive days, in Arabic or English depending on where the cohort runs. Each participant brings a real leadership problem from their own service and leaves with a plan for it.

- Leading colleagues who were your peers
- Running a meeting that reaches a decision
- Managing performance and conflict
- Reading your service's numbers
- Representing your team upward without losing its trust

Also available to institutions as an in-house programme for their own clinical leaders.

AI for Clinicians

What AI can and cannot do in clinical and professional work, how to use it safely and well, and where the professional and medico-legal lines sit.

Useful

Where AI genuinely saves time in letters, summaries, teaching and research — and where it does not.

Safe

Confidentiality, accuracy and the checks that must stay with the clinician.

Defensible

Who is responsible for an AI-assisted decision, and how to document it.

Practical rather than technical. Details go to the Foundations waitlist first.

WHO TEACHES IT

Dr Ahmed Abouelghit

UK-trained Consultant Forensic Psychiatrist · Founder, MedLex

He directs specialist training and has led clinical services across the United Kingdom, Egypt and Qatar — appraising, supervising, interviewing and investigating. Foundations is the course he wishes someone had given him.
